

repeal in Yorkshire as well as in Ireland, to be a local government is concerned. He will not be surprised to find that with John O'Connell, or Mr. Reynolds, or Mr. Bright, or Mr. H. B. H. Innes, the Repeal question, on their side.

There is a general, though somewhat erroneous, correspondence in the *Coch* garrison to secure a Constitutional Hall—they are to oppose Mr. Shell, they think that John O'Connell and then Mr. J. Scott, are to be the leaders of the movement. The cause of the movement in promising first Mr. O'Connell and then Mr. J. Scott, is that the former was the cause of Shell's return. One thing is very clear from the elections in all parts of Ireland, that the repeal depth and strength are no where less felt than by the professed leaders of the party in Constitution Hall—they leaders quarrel or become indifferent to the cause more closely, and more firmly adhere to the principles of repeal.

The fortnight's history of Scotland turns chiefly on the now concluded elections and the Queen's visit. Edinburgh is preparing for gaily without either; Hartie is engaged to sing at a concert, and it is engaged to sing at a concert, all the tickets for which are already sold.

COMMERCIAL LETTER.

LONDON, 24th August, 1847.

The gloom which hung over commercial affairs when the year began has unfortunately been increased by large and various imports, the total amount exceeding one million sterling, chiefly represented by bills of exchange, foreign and English, and in consequence of the depreciation of the pound in value. Already failures have taken place in the near European ports, and there appears to be well-grounded reason to expect similar results in the northern ports and America. This upward current of imports has been a most disastrous effect. Foreign countries cannot sell their bills on change with the same facility as last year, and the result is that nearly every article of consumption is dearer. The cost of living has increased, with a tendency of lower prices, and advances were formerly so readily made upon produce or bills of exchange, that the importers of foreign goods had their acceptances put in the market at the present time.

The market again declined last week, but there has since been a slight improvement, and a part of the depression has been removed. Strong qualities command a premium, and the market is now in the hands of large buyers, but prices remain extremely low. From 10s. to 12s. ; below 30s. to 42s. ; grey and white, to 12s. The importers of foreign from our home dealers, are at present very good and fine descriptions; as British plantation is now the chief, a large portion of foreign is of the lowest quality. The market is still going on very satisfactorily, and from an official document lately published, it appears that the brewers and distillers have increased their production and quantity, the former about 1000 tons, the latter 250 tons, while the writers who indulge in prophecies told us that a further decline was required.

Correspondence has been tolerably well supported, and this is declined considerably.

It has been dull and drooping. Madras offered and bought 14s. to 16s. to the export, and good a demand for exportation the last two days, and higher prices are now demanded.

China, 21. A small public sale of Madras was forced off at 2s. per lb, but that must not be taken to have governed the market, as purchases were not made under 2s. 2d. Leeward sold at 2s. 2d.

In other East India articles there has been but a slight alteration in prices, the general tone of markets being dull, and the fear of a crisis in the money market has not yet passed.

MERCATOR.

STATE OF TRADE.—The Manchester Courier, in its article of yesterday, gives a very cheery picture of the condition of affairs in the manufacturing districts, and of the general improvement of trade, which is temporary and only confirmed by present documents. Everything, unhappily, is as bad as possible, the fall in the corn market has contributed to the bad state of affairs, which is reflected in Lancashire and the north. The utter stagnation of trade has led to the only refuge they have—a return to contracted production—again meeting upon the operators of the mills a double blow, the fall in the market and a corresponding reduction in their means of production. We hear from all the neighbouring towns of mills about to stop, and of others to go on to a standstill.

At present, however, there is a slight improvement in the corn market, and Co. has stopped, or is about to stop, and this is not a solitary instance; several others, however, are still in a bad way. The manufacturers, having either adopted the same course, or being about to do so, we hear similar accounts from all quarters of the country, and of the general stagnation of trade, which has been adopted by the majority of the manufacturers.

As regards Manchester, we are in possession of the usual official returns, which shows that three mills are now in a standstill, and that others are still before full time, and that one which was previously on short time, has also been stopped entirely.

On the 1st of August, 1846, the number of mills

in the city was 120, and 600 hands employed, and a corresponding reduction in their means of production.

We hear from all the neighbouring towns of mills about to stop, and of others to go on to a standstill.
